Elastic Search	Github
Jenkins	AWS
Data Structure & Algorithms	
Rest	

API Gateway:

A stateless micro service of vendor management system, which acts as a gateway between vendor app and internal upstream services.

Search Service:

A stateless micro service build on top of elastic search. Multiple services call search service to search data fast and efficiently with some really complex filters.

External Integration Service:

This Service aims to abstract out external clients from internal system. The service acts as a layer between internal services and third party clients.

Pricing Service:

A stateful micro service which handles the pricing logic for holiday packages.

Dynamo Stream Catcher:

Deployed on AWS Lambda, this lambda function catches the stream of dynamo DB and dump the data to Elastic Search cluster, whenever any CUD operation is performed on the database.

Admin Panel:

A React based client side, single page application, used by Sales Agents to create Holiday Packages, managing their price& inventory, and other necessary stuffs.
